## FURNITURE FIT GUIDE

*an essential how-to for measuring and more*

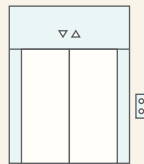

### MAKE AN ENTRANCE

Complete a walk-through of the path you'll take from the delivery truck to your home, accounting for patios, gardens, sidewalks, apartment lobbies and entrances. Measure any fixed widths (such as porch steps) that may give you trouble.

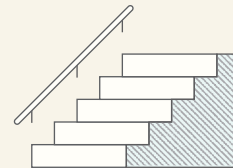

### KNOCK-KNOCK

Measure the height and width of any doorways and hallways in your path. Consider your options, including side doors and garages. Account for handrails, door knobs, trims and hinges that can't be removed. Measure the clearance from the door to the nearest wall or immovable object. If necessary, remove interior doors before delivery.

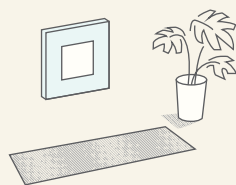

### GOING UP?

If you'll be taking an elevator, measure the height and depth of the elevator door as well as the interior height, width and depth. Determine how much wiggle room you'll have to work with by measuring diagonally from the bottom center of the door to the back ceiling. Account for handrails and lights that cannot be removed.

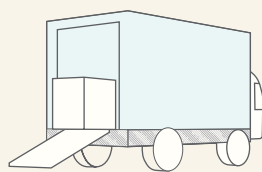

### STEP UP

Measure the width of any stairways and the width and depth of landings, accounting for handrails if you will not be removing them. Measure the clearance from the top and bottom of the stairs to the wall, the bottom step to the ceiling, the landing to the ceiling and the top step to the ceiling.

## MAKING MOVES

Note any objects that might get in the way on delivery day: light and ceiling fixtures, wall art, area rugs, plants and other décor. Account for stationary objects like fire sprinklers, angled or low ceilings and handrails. Find alternative pathways if necessary.

## DELIVERY DAY

*Before your new furniture arrives,  
we kindly suggest:*

- 1) Removing furniture that is being replaced, as our delivery team is unable to assist in moving existing furniture.
- 2) Clearing a path and protecting anything susceptible to damage such as floors, furniture or entryways.
- 3) Moving pets to a separate room to keep them safe.

## COMPARE YOUR MEASUREMENTS

Once you've collected detailed measurements throughout your home, compare them to the dimensions of the furniture you've selected (found in the details section of each product page). The width and height of your *new* furniture should be *less* than the width and height of doorways, hallways and stairways in your dwelling.

To determine whether your new furniture will fit in your room of choice, we also recommend creating an outline of the furniture dimensions on your floor using painter's tape. Be mindful of access to outlets, light switches, vents and entryways. Please consider the size and scale in comparison to your current furniture.

**STILL NOT SURE? JUST ASK!**
