

HINGED TREE ASSEMBLY INSTRUCTION

HELPFUL HINTS:

Please read the instruction completely before you assemble your tree. The model number of your tree was printed on the side of the carton. Always use this number to identify your tree if any question arises.

Save the carton for storing your tree.

Use miniature tree lights.

The stand shown here may differ from the stand which your supplier provided.

ASSEMBLY

1. Assemble – Insert tree pole into the stand. If the tree was divided into two sections, please assemble the two sections, place pole and secure tight into stand.

2. Shape the branches – Start from branches nearest to pole. Fan out one tip to the left, one to the right and one at the center of the main stem.

Alternate branches to avoid they line up after others. At the end of the stem, the tips of center branch should be extended straight out. Curve each branch slightly to make the tree have a natural look.

3. Shape the top section – Pull down branches of the lowest layer in an even circular pattern and repeat for each layer till the top branch. Curve each branch and top branch straight up to a fixed position.

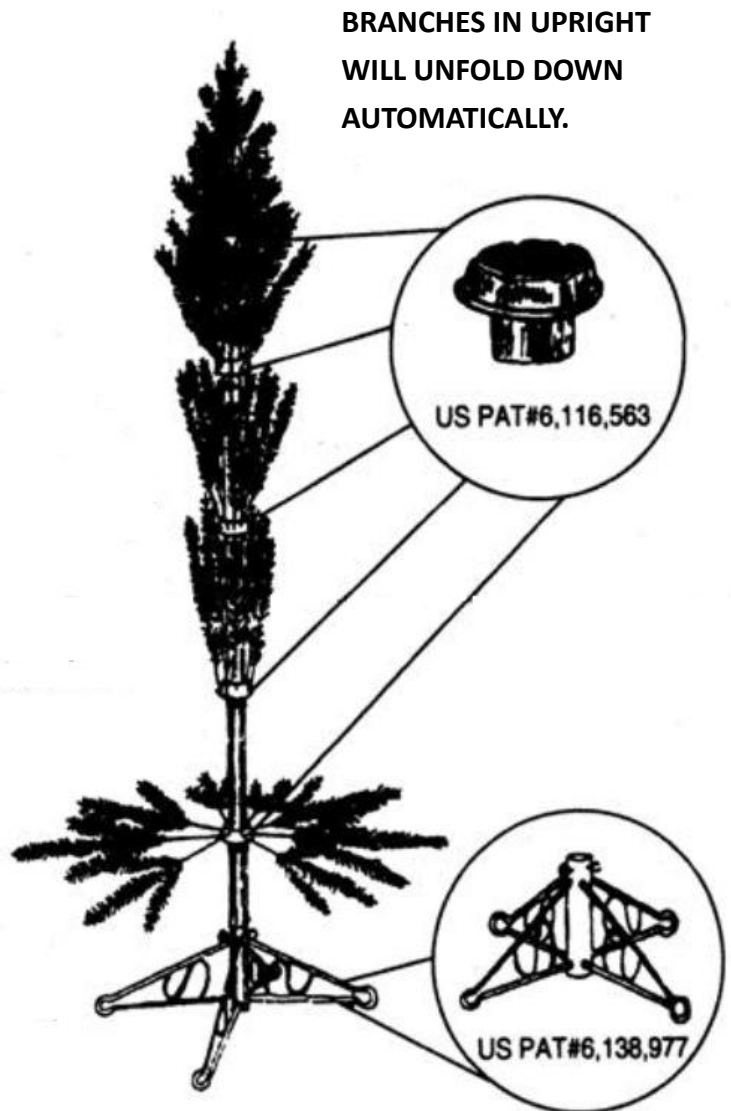

4. Insert tree top section into the hole and make sure the pole is firmly inserted into the next section. The tree top should conform to the rest of tree.

5. There are no missing branches on the tree, for example, some of the tree sections having 5 branches with a 6-hole-hook. Those sections have only 5 branches. It does not affect the outlook of the tree.

Storage tips:

Pull out the plug and remove ornaments.

DO NOT store the tree in a damp area where the temperature is over 40°C.

BRANCHES IN UPRIGHT
WILL UNFOLD DOWN
AUTOMATICALLY.

POSITION BRANCHES CORRECTLY TO
THE HINGE JOINT.
